With over six years invested in development and field testing, we believe that the Innovative Reel Technologies® spinning reels have reached the pinnacle of performance. Durability is our top priority and easily achieved with our patented aluminum housing design components. Our reels are intended to last a lifetime, designed for serviceability, and backed by a team poised to exceed any customer expectation. IRT's dedicated development and production teams work with our users to provide the highest quality customer and product service in the industry today. The 500 model is designed for heavier freshwater applications like pike and catfish. This reel is perfect for bringing in big pike when using live or spinner baits. This model can also be combined with a medium to heavy action rod to cast from the jetty for stripers and to catch redfish in bays. The 500 model reel is complimented by a large river or lake rod or a small bay rod, equipped with 15-20 lb. test monofilament line. The reel can hold 290 yds. of 15 lb. monofilament line or 295 yds. of 65 lb. braided line.

**“Innovation Beyond Description,
Performance Beyond Compare”**

Made in the USA

IRT's dedicated development and production teams work with our users to provide the highest quality customer and product service in the industry today. IRT recommends each reel be sent to our home office in Pine Grove, Pennsylvania, for an annual service **DEPENDENT ON THE AMOUNT OF YEARLY USE**. Service provided by IRT's expert personnel will maintain the superior performance and can include adjustments to the drag, gear, operation, reel balance, and other functions. Proper maintenance will ensure your IRT Reel functions to the best of its capabilities throughout its lifetime.

Innovative Reel Technologies reserves the right to modify parts, colors, packaging, options, and accessories without notice.

Color illustrations shown are as accurate as photography and printing processes allow. Final selection of color should be made from a physical sample. Please contact Innovative Reel Technologies to receive a physical sample of your choice. Additional options are available with extended lead times.
