With over six years invested in development and field testing, we believe that the Innovative Reel Technologies® spinning reels have reached the pinnacle of performance. Durability is our top priority and easily achieved with our patented aluminum housing design components. Our reels are intended to last a lifetime, designed for serviceability, and backed by a team poised to exceed any customer expectation. IRT's dedicated development and production teams work with our users to provide the highest quality customer and product service in the industry today. The 400 model is designed for slightly heavy fishing applications, such as rivers, lakes, and light saltwater. The reel is best outfitted with 10-15 lb. test monofilament line and a medium to fast action rod. This model works well when using crank baits for large mouth bass or when jigging for walleye. The 400 model can hold 240 yds. of 12lb. monofilament line or 255 yds. of 50 lb. braided line.

**"Innovation Beyond Description,
Performance Beyond Compare"**

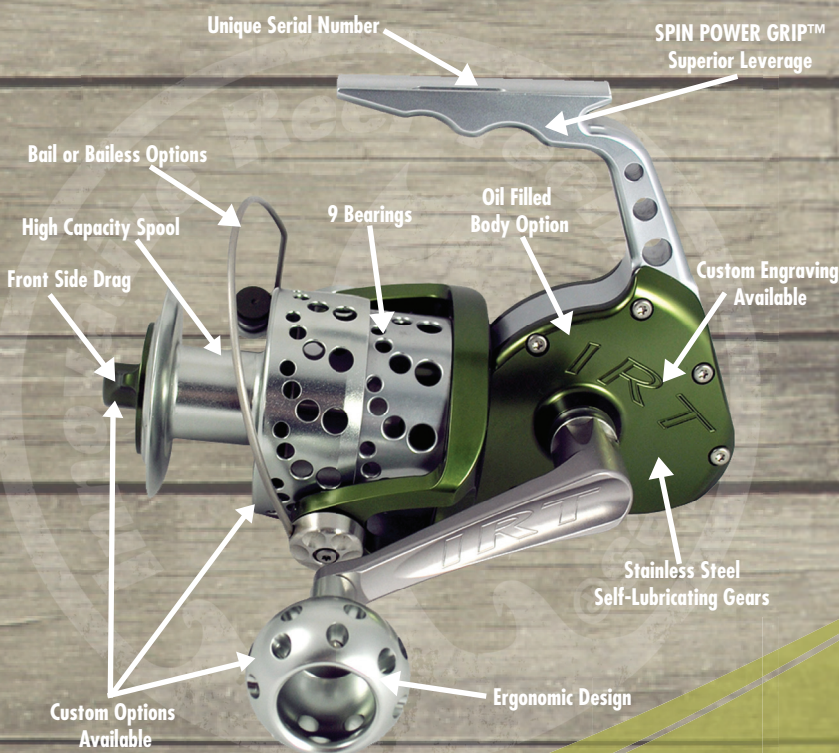

400 MODEL SPINNING REEL

IRT's dedicated development and production teams work with our users to provide the highest quality customer and product service in the industry today. IRT recommends each reel be sent to our home office in Pine Grove, Pennsylvania, for an annual service **DEPENDENT ON THE AMOUNT OF YEARLY USE**. Service provided by IRT's expert personnel will maintain the superior performance and includes, but is not limited to adjustments to the drag, gears, reel balance, and other functions. Proper maintenance will ensure your IRT Reel functions to the best of it's capabilities throughout it's lifetime.

Innovative Reel Technologies reserves the right to modify parts, colors, packaging, options, and accessories without notice.
