

Who We Are

INNOVATIVE REEL TECHNOLOGIES®

Made in the USA

Patented SPIN POWER GRIP®

Hand Crafted

Standard Limited Warranty

Yearly Maintenance Options

Durability Proven with 6+ Years of Field Testing by Professional Sports Anglers

INNOVATIVE REEL TECHNOLOGIES®

Innovative Reel Technologies® was founded to provide high quality US manufactured reels. Our reels are time tested and backed by fishermen and women of all types. Whether you are a recreational fisherman, a charter boat aficionado, or a charter boat captain, our fishing reels are designed with you in mind. From our proprietary manufacturing methods that create superior strength, to the final hand assembly and inspection, IRT meticulously tracks each step of the manufacturing process.

Although IRT has invested over six years into the development and field testing of our reels, we are still continuously enhancing our products based on feedback provided by field testers and charter boat partners. "Good enough," is not acceptable; IRT strives to produce the best reels on the market by exceeding customer expectations.

IRT reels are available in standard and custom configurations. Our exclusive reels can feature the patented SPIN POWER GRIP® seat, which provides a superior mechanical advantage when fighting and landing fish.

MANUFACTURED AND ASSEMBLED IN THE USA

IRT's dedicated production and development teams work with our suppliers and customers to provide the highest quality products and services available in the industry today. IRT reels are both manufactured and assembled in Pine Grove, Pennsylvania. IRT also sources packaging, gears, springs, fasteners, and many other components to bring our product to your hands from US manufacturers. We welcome visitors to take a tour of the facility, see the IRT reel production space, and talk with our engineers.

IRT's STRIKE SAVER® feature allows anglers the ability to easily switch to "free spool" mode when trolling or during live bait applications. The reel can immediately be switched back to engage the drag system when a fish is hooked.

Innovation Beyond Description, Performance Beyond Compare®
